WRITE WINNING NIH GRANT PROPOSALS

A ONE-DAY SEMINAR | JOHN D. ROBERTSON, PH.D., PRESENTER

TUESDAY, AUGUST 23, 2016 | 8:30 A.M. - 4:30 P.M.
JOHN PEACE LIBRARY, ASSEMBLY ROOM (JPL 4.04.22)

This seminar will address aspects important to writing competitive NIH grant proposals. Geared toward faculty members, postdoctoral researchers and administrative staff with grant writing responsibility, emphasis is given to doing the ‘extra’ things that can make the difference between success and failure. Dr. Robertson will also address recent specific changes to the NIH requirements: new requirements for rigor, transparency, and reproducibility; changes to the writing of the Approach and Research Design subsections; and changes to the way that the Significance subsection should be written.

Participants will be taught to write with a linear progression of logic using the step-by-step process outlined in The Grant Application Writer's Workbook—NIH version, of which everyone will receive a FREE COPY. It will be a guide to writing a competitive application, offering a practical, step-by-step approach to grant writing. Given that applicants are writing for two different audiences — the assigned reviewers, who read the application in its entirety, and non-assigned reviewers who may have read little, or nothing, of the proposal before the meeting of the review-panel — coping strategies will be emphasized.

Dr. John D. Robertson received his Ph.D. from The University of Texas at Austin in pharmacology and toxicology in 1999. From 1999-2003, he was a postdoctoral research fellow at the Karolinska Institute in Stockholm, Sweden. He was subsequently hired in 2004 by the University of Kansas Medical Center in Kansas City, KS, where he was a faculty member in the Department of Pharmacology, Toxicology & Therapeutics for seven years, and an associate member of the University of Kansas Cancer Center for six years. In 2010, he was recruited to teach grantsmanship by Grant Writers' Seminars and Workshops.

Dr. Robertson has been the recipient of competitive extramural funding from both the NIH and non-federal sources. He has authored 30 peer-reviewed journal articles and three book chapters. He has been a member of grant review panels, a reviewer for a number of biomedical journals, and served on editorial boards. In addition, he has been routinely recognized for excellence in teaching.
