

Hazardous Material Management Hazardous Waste Labels

Hazardous Material Management (HMM) **will require** labs to use the below Hazardous Waste labels to be compliant with EPA and TCEQ regulations which regulate Satellite Accumulation Areas (SAA). Hazardous waste containers shall be labeled the moment hazardous waste has entered the container with "Satellite Accumulation Start Date" and "Constituents and percentages". ***No abbreviations.** Waste containers shall be stored within the SAA, with the use of secondary containment. HMM will provide SAA Hazardous Waste labels and ties for use on the 2.5-gallon (10 L) containers. Below will guide labs through the process of filling out the labels for use.

**HAZARDOUS WASTE
SATELLITE ACCUMULATION**

Generator Information:
 SUBMITTER NAME: _____
 LAB #: _____
 PI: _____ pH: _____

COMPOSITION: _____ %
 (No abbreviations or chemical formulas)

PHYSICAL FORM
 Solid
 Liquid
 Gas

HAZARD CLASS
 Flammable
 Corrosive
 Toxic/Poison
 Reactive

SATELLITE ACCUMULATION START DATE: ____/____/____
 WASTE STORAGE START DATE: ____/____/____

HCL® WWW.HCLCO.COM HWSA-UTSA HMM

Lab#: please label with building and lab number.

PI: Principle Investigator of the lab.

pH: If it applies to the chemical in the container.

Composition%: no abbreviations, chemical formulas or structures will be accepted. Please be as accurate as possible.

Hazard class: please identify any associated hazards. SDS or ChemTracker can be used for this data.

Satellite Accumulation Start Date: refers to the date that chemical waste first enters the container.

Submitting Hazardous waste

The label will also need to be filled out a specific way to let HMM know that the waste is ready for pick up. Filling the label out in the specified manner will allow labs to move away from having to print out submission paperwork for the 2.5 gallon containers only, at this time. Biological boxes and all other waste containers (e.g. empty containers, 4L glass bottles...) will still need to have submission paper work printed out and attached. Please follow the below guide in filling out the label one the container has been submitted through BioRAFT.

Note: when any empty chemical containers have been submitted through BioRAFT, please make sure it has been removed from chemTracker, and the QR code has been marked out to let HMM know it is ready for disposal

Pick up request #: needs to be written in this corner of the label and make sure it corresponds to the BioRAFT submission.

Sub: "Sub" will be written in the bottom right-hand corner of the label, this seems redundant, but this is just another way to let HMM and other lab member know that the chemical waste has been submitted.

Composition: label composition should match submitted constituents, submission will be rejected if the label composition does not match pick up request constituents.

Pick up request #1004
